ARGYLE CREEK WATER COMMISSIONER'S REPORT

By John Bene, Court-appointed Water Commissioner  
July 7, 1963

All authorized diversions had measuring devices installed.

Neve Wimmer	1.50 cfs
Umbert Pressett	0.90 cfs
Henry Mills (North Side)	0.60 cfs
Henry Mills (South Side)	0.92 cfs
Preston Nutter Corp. (South)	0.90 cfs
Preston Nutter Corp. (North)	0.60 cfs
Hayes Place (Brock)	0.96 cfs

The Pressett place and Hayes places do not have control gates on their diversions from the stream. It is the opinion of the Water Commissioner that head gates could be installed in a stable section of the ditch with a controlled outlet to return any surplus water to the natural stream bed. The present location of the diversion points on the stream do not lend themselves to the building of a permanent control structure. It would be physically impossible to hold them in place during a flood.
